Verbal Description:

This modeled ceramic fragment is composed of a tan jicaro type paste. It is a ceramic body with part of the base. The applied image on the fragment is 2 rows of dots (frags. of 2 in top row & 3 in the bottom) w/ apx. 2.5 cm diameter. Reimbodied from the dots is a bar 9.2 cm long & 1.8 cm high. From the center is a flank somewhat phallic shaped, hanging 5 cm. It is 1.2 cm wide. Coming from under the bar on either side of the flank are two legs 5.5 cm long by 1 cm wide. The feet are bulbous lumps. There is red paint to the area <sup>left</sup> of the legs in a rectangular pattern. The shud has a ridge that juts around at the level of the bottom of the belt. The area <sup>right</sup> of the red rectangle is burned to black below the ridge. There is no slip or brush <sup>right</sup> stroking. The feet are 2.8 cm above the shud base.
